Given state diagram for the machine M_1 is

Formal definition of a finite automata is

A finite automaton is a 5-tuple $(Q, \Sigma, \delta, q_0, F)$

Where

1. Q is a finite set called states
2. Σ is a finite set called alphabet
3. $\delta: Q \times \Sigma \rightarrow Q$ is the transition function.
4. $q_0 \in Q$ is the start state
5. $F \subseteq Q$ is the set of accept states.

Now we can describe M_1 formally by writing $M_1 = (Q, \Sigma, \delta, q_1, F)$, where

1. $Q = \{q_1, q_2, q_3\}$
2. $\Sigma = \{a, b\}$
3. δ is described as

	<i>a</i>	<i>b</i>
<i>q</i> ₁	<i>q</i> ₂	<i>q</i> ₁
<i>q</i> ₂	<i>q</i> ₃	<i>q</i> ₃
<i>q</i> ₃	<i>q</i> ₂	<i>q</i> ₃

4. *q*₁ is the start state
5. Set of accept states $F = \{q_2\}$.

Given state diagram for the machine *M*₂ is

Now we can describe *M*₂ formally by writing

$M_2 = (Q, \Sigma, \delta, q_1, F)$, where

1. Set of states $Q = \{q_1, q_2, q_3, q_4\}$
2. Set of alphabet $\Sigma = \{a, b\}$
3. δ is described as

	<i>a</i>	<i>b</i>
<i>q</i> ₁	<i>q</i> ₁	<i>q</i> ₂
<i>q</i> ₂	<i>q</i> ₃	<i>q</i> ₄
<i>q</i> ₃	<i>q</i> ₂	<i>q</i> ₁
<i>q</i> ₄	<i>q</i> ₃	<i>q</i> ₄

4. *q*₁ is the start state
5. Set of accept states $F = \{q_1, q_4\}$
